#### 【化学・バイオ工学分野】

| 教育研究分野名  | 内 容   |     | 教    | 員  | 名           |
|----------|---|-----|------|----|-------------|
| 有機機能化学   | 有機分子に関する分子認識, 触媒作用, 輸送, 分子デバイス, 自己組織化等に関する教育・研究                                 | 教技  | 受 伊. | 藤  | 和明          |
| 無機機能化学   | 雰囲気に応じて電気伝導性が変化したり、外部刺激によって発光することで人間の知覚をサポートするような「インテリジェントセラミックス」の創製に関する基礎と応用   | 教技  | 受 松  | 嶋  | 雄太          |
| 生物資源化学   | 天然資源を有効に利用する有用な材料の設計と合成に関する研究と教育  | 教技  | 爰 落  | 合  | 文吾          |
|          | 生体機能関連化学を基盤とした生体機能分子の制御と有機合成への応用ならびにインテリジェント・マテリアルの開発に関する教育・研究                  | 教技  | 受 木  | 島  | 龍朗          |
| 有機機能材料   | 無機・高分子を含むナノ粒子・ナノ結晶の作製手法や応用展開を見据えた薄膜作製による機能発現に関する教育・研究                           | 教技  | 受 増  | 原  | 陽人          |
| 粉粒体材料工学  | 粉体の付着力,力学特性からスラリーの分散特性に関するDLVO理論を示すとともに,界面活性剤,水溶性高分子やカップリング剤など積極的な分散手法に関する教育と研究 | 教技  | 受 木  | 俣  | 光正          |
|          | 機械的操作および粉体物性とハンドリングに関する教育・研究  | 助   | 女 小  | 竹  | 直哉          |
| 細胞機能解析工学 | 細胞生物及び分子生物的解析技術を駆使した肺由来生理活性物質の機能解析と医療応用<br>に関する教育・研究                            | 教技  | 爰 黒  | 谷  | 玲子          |
| 生体機能修復学  | 疾患に由来する生体機能の修復を目的とした材料科学、細菌学と再生医学を融合した境界<br>領域に関する教育・研究                         | 教技  | € 山  | 本  | 修           |
| 生命有機化学   | 生命現象解明ならびに医薬品創成を目指した有機化合物の設計ならびに合成に関する教育・研究                                     | 教技  | 妥 今  | 野  | 博行          |
| 界面化学     | ソフトインターフェースにおける物理化学的現象に関する研究  | 教技  | 受 野  | 々木 | <b> </b> 美宗 |
| 有機合成化学   | 有機金属反応を基軸とした新規合成反応及び新規合成ルートの確立に関する研究・教育.<br>及び,包接化学を用いた化合物の分離・分割に関する研究・教育       | 准教持 | 受 波  | 多里 | 予豊平         |
| 光ナノ計測    | 光学顕微鏡技術を駆使した単一分子レベルでの高感度・高精度測定, 超解像蛍光顕微鏡の開発, 光ナノ計測の生体計測等への応用に関する教育・研究           | 准教持 | 受 堀  | 田  | 純一          |
| タンパク質工学  | 遺伝子工学を駆使した工学的に有用なタンパク質の人工設計,および構造形成原理の解明に関する教育・研究                               | 教技  | 妥 真  | 壁  | 幸樹          |
| 生体機能材料工学 | 生体組織の仕組みに学ぶ硬組織代替・修復支援材料の設計, 創製, 評価に関する教育<br>・研究                                 | 教技  | 受 川  | 井  | 貴裕          |
| 応用微生物学   | 微生物を利用した食品、医薬品や環境技術に関する教育・研究  | 准教技 | 受 矢  | 野  | 成和          |
| 代謝生理学    | エネルギー代謝システムの人工制御と医療への応用に関する教育・研究  | 助   | 女 佐  | 藤  | 大介          |

### 【情報・エレクトロニクス分野】

| 教育研究分野名                          | 内 容  |    |    | 教 員    | 名            |
|----------------------------------|--|----|----|--------|--------------|
| 静電気・電気エネルギ<br>一工学                | 気体放電を含む高電界現象の解明と,機械加工・塗装等への工学的応用に関する教育・研究  | 准教 | 效授 | 杉本     | 俊之           |
| 半導体材料・<br>デバイス工学                 | ナノレベルで制御された機能性材料を用いた超高速, 発電, 新機能デバイスに関する教育・研究                                    | 教  | 授  | 廣瀬     | 文彦           |
|                                  | 気体-固体表面反応,特に,気体原子・分子の吸着・引抜き現象の理解とそれに基<br>づいた新規半導体デバイスの作製と応用に関する教育・研究             | 教  | 授  | 成田     | 克            |
| 磁性材料・デバイス工学                      | ナノ構造制御手法である薄膜プロセスを用いた磁性材料の磁気特性および輸送特性に関する教育と研究                                   | 教  | 授  | 小池     | 邦博           |
| 超伝導材料・<br>デバイス工学                 | 超伝導に関する基礎研究及び超伝導高周波デバイスや高感度ジョセフソン接合等の応用に<br>関する教育・研究                             | 教  | 授  | 齊藤     | 敦            |
| 光通信工学                            | 光導波路を利用した高機能な光信号処理技術および光通信技術と,電磁界計算を用いた<br>光機能回路の設計技術に関する教育・研究                   | 教  | 授  | 高野     | 勝美           |
| 数理情報                             | 要素分割を必要としない偏微分方程式の数値解法とその工学的問題への応用に関する教育・研究                                      | 准载 | 效授 | 齋藤     | 歩            |
|                                  | 数値電磁界解析の高性能解法とその工学的応用に関する教育・研究   | 准载 | 效授 | 高山     | 彰優           |
| 確率的情報処理                          | 確率モデルを用いた統計処理計算アルゴリズムの解析と,統計的データサイエンスへの応用に関する教育・研究                               | 教  | 授  | 安田     | 宗樹           |
| 数理物理学                            | 数理物理学の可解模型の厳密解の構成のための数学に関する教育・研究   | 教  | 授  | 小島     | 武夫           |
| 情報計測及び画像工学                       | 心理物理的手法を用いた知覚情報処理メカニズムの解明,及び色彩科学や照明・画像工学への応用技術に関する教育・研究                          | 教  | 授  | 山内     | 泰樹           |
|                                  | 時系列信号および画像データより所望の情報を獲得するための計算機アルゴリズムとその医<br>学データへの応用に関する教育・研究                   | 教  | 授  | 深見     | 忠典           |
|                                  | 音響波を用いた非破壊検査の技術およびシステムを理解するとともに実用されている信号処理技術や画像処理法に関する教育・研究                      | 准载 | 效授 | 柳田     | 裕隆           |
| 計算論的神経科学·数理<br>工学                | 脳の数理モデル・非線形力学系の解析・システム最適化に関する教育・研究   | 教  | 授  | 久保日    | 田繁           |
| 半導体ナノ材料・エネル<br>ギーデバイス工学          | 半導体ナノ材料の構造に着目した機能材開発とエネルギーデバイスへの応用に関する教育・研究                                      | 准差 | 效授 | 有馬 アハン | ホ゛シール<br>マト゛ |
| 非線型現象科学                          | 自然界に存在する様々な非線型現象に伴う創発・自己組織化に関する教育・研究   | 准差 | 姓授 | 田中     | 敦            |
| 生体計測システム・半導<br>体集積回路工学           | 高周波無線通信工学の概論及び無線周波RF-CMOS集積回路設計理論と、これら最先端通信技術の生体情報信号処理システムなどへの応用に関する教育・研究        | 教  | 授  | 横山     | 道央           |
| 高効率情報処理集積回<br>路及び集積化センサ・シ<br>ステム | CMOS技術を応用した多目的用途集積化センサとエネルギー効率の良い情報処理集積回路の設計理論・試作評価、及びこれらのIoTシステム分野への応用に関する教育・研究 | 助  | 教  | 原田     | 知親           |
| 光機能工学・半導体光デ<br>バイス               | ハイブリッドナノ構造の光物性評価・新奇光機能創成,及び次世代発光デバイスへの応用に<br>関する教育・研究                            | 准孝 |    | 大音     | ———<br>隆男    |
| 生体計測及び画像工学                       | 生命科学研究のための高度画像計測技術と計算機応用技術を用いた光学的センシングシステムの開発と応用に関する教育・研究                        | 准孝 | 效授 | 渡部     | 裕輝           |

#### 【機械システム工学分野】

| 教育研究分野名                          | 内 容  |     | 教員    | 名      |
|----------------------------------|--|-----|-------|--------|
| 材料力性工学及び計算<br>材料科学               | 大変形を前提とした非弾性材料の構成式の開発・改良とその数値シミュレーションへの導入<br>及びそれらの材料挙動予測への応用に関する教育・研究         | 教授  | 差 黒田  | 充紀     |
|                                  | 計算機シミュレーションに基づく材料の結晶構造, 微視組織, 機械的性質および変形・強度<br>特性の予測・評価手法に関する教育・研究             | 教授  | & 上原  | 拓也     |
|                                  | 固体材料のミクローメゾーマクロ変形挙動, マイクロ構造体の作製, マイクロセンサ・アクチュ<br>エータの開発に関する教育・研究               | 教授  | 村澤    | 副      |
| 先端材料工学                           | 生体適合性ソフト&ウェット材料の創製と機械への応用,光学的手法を活用した生体含水軟組織の構造と機構解明,生体を模倣したソフトマシン開発に関する教育・研究   | 教授  | き 古川  | 英光     |
| レーザー工学及びマイク<br>ロナノ工学             | 微小空間で起こる光学現象を基盤とした微小物体の光操作、光加工、光計測の新原理創出<br>に関する教育・研究                          | 教授  | 透 西山  | 宏昭     |
| 熱流体工学及び移動現<br>象工学                | 磁気力による電気伝導性流体および非電気伝導性流体の熱伝達制御,生体内の光伝播特性の解明,熱流体数値シミュレーションおよび固体の比熱容量測定に関する教育・研究 | 教授  | 永松    | 正人     |
|                                  | 熱流体現象の解析と制御、マイクロスケールの熱流体現象に関する教育・研究  | 教授  | 更 鹿野  | 一郎     |
| スマートマイクロ構造工学                     | 微細な泡、カプセル、粒子等が有する基本構造の解明および固有の機能を生かした応用技<br>術に関する教育と研究                         | 教授  | 幕田    | 寿典     |
| 熱流体工学及びふく射伝<br>熱                 | 太陽光熱回収、防災技術、宇宙機熱設計や光熱癌治療などの熱利用技術に資するふく射<br>伝熱制御技術に関する教育・研究                     | 教授  | 逐 江目  | 宏樹     |
| ロボティクス及び                         | テレロボティクス・バーチャルリアリティに関する研究・教育   | 教授  | 妻木    | 勇一     |
| 機械運動制御工学                         | 移動ロボットの機構,制御手法およびその応用に関する教育・研究   | 教授  | 後 水戸  | 部和久    |
|                                  | 機巧学を応用したロボットの新規機能の創出に関する教育・研究  | 教授  | 多田    | 隈理一郎   |
| バイオロボティクス                        | 生物を規範とする柔軟なメカニズムと行動生成能力を持つロボットおよび細胞の微細操作を可能にするマイクロハンドに関する教育・研究                 | 教授  | 差 井上  | . 健司   |
| 再生医療工学                           | 再生医療工学における細胞機械生物学、細胞3次元培養バイオリアクタおよび心筋再生組織の構築に関する研究・教育                          | 教授  | 送 馮 / | <br>忠剛 |
| 生体分子機能工学                         | 生物運動の基盤となるモータータンパク質の機能解析とそれらを利用したナノ テクノロジーに<br>関する教育・研究                        | 准教授 | 妥 羽鳥  | 晋由     |
| システム制御及び<br>ファジィ・ニューラル<br>ネットワーク | 適応制御,ロバスト制御,ハイブリットシステム理論に関する教育・研究  | 准教授 | 髮 村松  | 鋭一     |

### 【建築・デザイン・マネジメント分野】

| 教育研究分野名 | 内 容  | 教 員 名     |
|---------|--|-----------|
| 建築計画学   | 特に民家や社寺建築における伝統木造構法についての部材の構成原理や構成方法に関する研究と教育          | 准教授 濱 定史  |
| 建築構造工学  | 最先端の建築構造設計手法と建物・地盤の地震応答や動的相互作用など時系列データの<br>分析に関する研究と教育 | 教 授 三辻 和弥 |
|         | 地域の実態を把握・検証し,課題を洗い出すとともに、課題解決にむけた手法に関する研究と<br>教育       |           |
| 建築デザイン学 | 建築デザインにおける設計理論の構築と建築・都市空間の構成要素の数理的解析に関する<br>研究と教育      | 准教授 宗政 由桐 |

#### [Applied Chemistry, Chemical Engineering, and Biochemical Engineering]

Primary Academic Advisor 

If you are applying for admission to the doctoral program, please select one of the faculty members listed here in the "Name of Desired Supervising Instructor" section of the application form.

|                      | listed here in the "Name of Desired Supervising Instructor" section of the app      |                         |

|------------------------|--|-----------------------|
| Field                  | Contents of Education and Research   | Instructors           |
| Static electricity,    | Analysis of phenomena in a high electric field including those of gas discharge,   | Toshiyuki Sugimoto,   |
| electricity and energy | and application thereof to engineering operations such as mechanical processing  | Assoc Prof.           |
| engineering            | and painting   |                       |
| Semiconductor          | Researches and developments on high-performance photovoltaic devices with  | Fumihiko Hirose,      |
| materials and device   | atomically controlled film interfaces  | Prof.                 |
| engineering            |  |                       |
|                        | Studies on gas-solid surface reactions such as recombinative desorption from and   | Yuzuru Narita, Prof.  |
|                        | abstraction at semiconductor surfaces, and developments on new semiconductor   |                       |
|                        | device based on surface science  |                       |
| Magnetic materials     | Magnetic properties and transport properties of the magnetic materials created   | Kunihiro Koike, Prof. |
| and device             | through thin film processing as a nano-structure control method  |                       |
| engineering            |  |                       |
| Superconductive        | Basic studies on superconductivity and application to high-frequency   | Atsushi Saito,Prof.   |
| materials and device   | superconducting devices and high-sensitivity Josephson junctions   | Trousin Suro, Tor.    |
| engineering            | superconducting devices and high south truly vest-phison juniousless   |                       |
| Optical                | High-performance optical signal processing and optical communication systems   | Katsumi Takano,       |
| communication          | using optical waveguides and optical integrated circuits designed by   | Prof.                 |
| engineering            | electromagnetic computing  |                       |
| Mathematical and       | Studies on numerical methods for partial differential equations using meshless   | Ayumu Saitoh,         |
| information Sciences   | techinique, and their applications in engineering fields   | Assoc Prof.           |
| 201010                 | womming in the area of parameter in the state of the stat | 120001101             |
|                        | Education and research on high-performance methods for numerical   | Teruou Takayama,      |
|                        | electromagnetic field analysis and its applications  | Assoc Prof.           |
| Probabilistic          | Education and research on probabilistic modeling and analysis of   | Muneki Yasuda,        |
| Information            | information processing system and on application to the field of statistical data  | Prof.                 |
| Processing             | science  |                       |
| Mathematical           | Exactly solvable models associated with quantum groups and elliptic quantum  | Takeo Kojima,         |
| Physics                | group  | Prof.                 |
| Physics                | group  | Prot.                 |

| Instrumentation psychophysical methods, and relevant applied technologies for color science, lighting industries, image engineering compiler algorithms to acquire desired information through time series signals or image engineering or image data, and application thereof to medical data  Computer algorithms to acquire desired information through time series signals or image data, and application thereof to medical data  Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technologies processing technologies and image processing technologies and systems, and system optimization  Research and education on the computational modeling of brain, analysis of nonlinear dynamical systems, and system optimization  Research and education on the computational properties of semiconductor anomaterials and their application in energy device  Non-linear phenomenon science  Biological  General studies of high-frequency wireless communication engineering, theory of RF-CMOS IC design, and application of those state-of-the-art elecommunication technologies to biological information signal processing systems engineering  Education and research on designing and evaluating multi-purpose integrated sensor device system  engineering and sensors and energy-efficient information processing LSI using CMOS technology and their application to the lof system.  Education and research on evaluation of optical properties and creation of novel engineering and photo-functions in hybrid nanostructures, and their applications for next-generation optical devices  Biological  Biological  Biological  Development and application of optical sensing systems using high-performance image measurement technologies and computer applicat technologies in the field sensors and energy-efficient engineering and sensors and energy-efficient properties and creation of novel engineering and engineering and engineering and engineering and engineering and  |                    |   | 1                     |
|--|--------------------|---|-----------------------|
| inage engineering Instrumentation informatics and image engineering  Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technol | Instrumentation    | Analysis of the perceptual information processing mechanism based on            | Yasuki Yamauchi,      |
| Instrumentation informatics and informatics and image engineering or image data, and application thereof to medical data  Computer algorithms to acquire desired information through time series signals or image data, and application thereof to medical data  Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technologies  Computational encuroscience and nonlinear dynamical systems, and system optimization  Nanomaterial and energy device  Nanomaterial and energy device  Non-linear phenomenon science phenomenon in nature  Biological General studies of high-frequency wireless communication engineering, theory of RF-CMOS IC design, and application of those state-of-the-art telecommunication technologies to biological information systems engineering  Energy-efficient information  Prof.  Tomochika Harada, Assist Prof.  Tomochika Harada,  | informatics and    | psychophysical methods, and relevant applied technologies for color science,    | Prof.                 |
| informatics and image engineering or image data, and application thereof to medical data  Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technologies  Computational neuroscience and mathematical engineering  Nanomaterial and energy device  Non-linear phenomenon science  Biological  General studies of biph-frequency wireless communication engineering, theory of RF-CMOS IC design, and application to the loT system.  Energy-efficient information processing LSI using CMOS technology and their application to the loT system.  Education and research on evaluation of optical properties and creation of novel engineering and semiconductor photo-functions in hybrid nanostructures, and their applications for next-generation optical devices  Biological  Development and application of optical sensing systems using high-performance image measurement tand engineering and semiconductor optical devices  Biological  Development and application of optical sensing systems using high-performance image measurement technologies and computer applied technologies in the field  Studies of technologies and systems that use sound waves for non-destructive testing, and systems that use sound waves for non-destructive technologies and system optimization and processing technologies of semiconductor technologies to biological information engineering, theory of RF-CMOS IC design, and application of those state-of-the-art telecommunication technologies to biological information signal processing systems of RF-CMOS IC design, and evaluating multi-purpose integrated sensor device & system  Tomochika Harada, Assist Prof.  Tomochika Harada, Assist | image engineering  | lighting industries, image engineering, etc                                     |                       |
| image engineering  or image data, and application thereof to medical data  Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technologies and integer and integer and application of the computational properties and creation of novel photo-functions in hybrid nanostructures, and their applications for next-generation optical devices  Biological  Development and application of optical sensing systems using high-performance image measurement technologies and computer applied technologies in the field  | Instrumentation    |   |                       |
| Studies of technologies and systems that use sound waves for non-destructive testing, and studies of commercialized signal processing technologies and image processing technologies  Research and education on the computational modeling of brain, analysis of nonlinear dynamical systems, and system optimization  Research and education on the computational modeling of brain, analysis of nonlinear dynamical systems, and system optimization  Study of the morphology-dependent functional properties of semiconductor anomaterials and their application in energy devices  Research of the emergence and self organization associated several non-linear phenomenon science  Biological General studies of high-frequency wireless communication engineering, theory of RF-CMOS IC design, and application of those state-of-the-art telecommunication technologies to biological information signal processing systems  engineering  Education and research on designing and evaluating multi-purpose integrated sensor device & system  engineering and engry-efficient information processing LSI using CMOS  technology and their application to the IoT system.  Education and research on evaluation of optical properties and creation of novel photo-functional engineering and engineering engine | informatics and    | Computer algorithms to acquire desired information through time series signals  | Tadanori Fukami,      |
| testing, and studies of commercialized signal processing technologies and image processing technologies  Research and education on the computational modeling of brain, analysis of nonlinear dynamical systems, and system optimization  Nanomaterial and energy device pandent functional properties of semiconductor nanomaterials and their application in energy devices  Non-linear phenomenon science phenomenon in nature  Biological General studies of high-frequency wireless communication engineering, theory engineering telecommunication technologies to biological information systems  engineering Energy-efficient integrated system engineering  Energy-efficient processing LSI and integrated sensor device & system  Photofunctional edvices  Biological Development and application of optical properties and creation of novel engineering and essurement and photo-functions in hybrid nanostructures, and their applications of optical sensing systems using high-performance image measurement and application of optical sensing systems using high-performance image measurement technologies and computer applied technologies in the field Assoc.Prof.  | image engineering  | or image data, and application thereof to medical data                          | Prof.                 |
| testing, and studies of commercialized signal processing technologies and image processing technologies  Research and education on the computational modeling of brain, analysis of nonlinear dynamical systems, and system optimization  Nanomaterial and energy device pandent functional properties of semiconductor nanomaterials and their application in energy devices  Non-linear phenomenon science phenomenon in nature  Biological General studies of high-frequency wireless communication engineering, theory engineering telecommunication technologies to biological information systems  engineering Energy-efficient integrated system engineering  Energy-efficient processing LSI and integrated sensor device & system  Photofunctional edvices  Biological Development and application of optical properties and creation of novel engineering and essurement and photo-functions in hybrid nanostructures, and their applications of optical sensing systems using high-performance image measurement and application of optical sensing systems using high-performance image measurement technologies and computer applied technologies in the field Assoc.Prof.  |                    |   |                       |

| computational         | simulations; and simulations of metal forming processes                               |                        |
| materials science     | Development of computational methods for estimation and evaluation of crystal         | Takuya Uehara,Prof.    |
|                       | structures, micro-structures, mechanical properties, deformation behaviors, and the   | -                      |
|                       | strength of materials   |                        |
|                       | Deformation behaviors at micro, mezzo and macro levels of solid-state materials,      | Go Murasawa, Prof.     |
|                       | creation of micro-structures, and development of micro-sensor actuators               |                        |
| Advanced materials    | Creation of bio-compatible soft and wet materials with new functions, application     | Hidemitsu Furukawa,    |
| engineering           | of those materials to machines, optical characterization of structures and            | Prof.                  |
|                       | mechanisms of water-containing tissues in living organisms, and development of        |                        |
|                       | bio-inspired soft machines  |                        |
| Laser processing      | Exploration of novel principles for optical manipulation, laser microfabrication, and | Hiroaki Nishiyama,     |
| and nanostructured    | metrology of micro-objects, based on optical resonant phenomena in                    | Prof.                  |
| photonics             | microenvironments   |                        |
| Thermal-fluid         | Studies on the heat transfer control of electroconducting and nonelectroconducting    | Masato Akamatsu,       |
| engineering and       | fluids by the magnetic force, the transient radiative transfer in a participating     | Prof.                  |
| transport             | medium subjected to a pulse train, and the specific heat capacity measurement of      |                        |
| phenomena             | solid   |                        |
| engineering           | Analysis of thermal fluid phenomena and control of those phenomena; and               | Ichiro Kano, Prof.     |
|                       | micro-scale thermal fluid phenomena   | ŕ                      |
| Smart                 | Basics and applications of microstructures such as microbubbles, microcapsules,       | Toshinori Makuta,      |
| Microstructure        | and micro/nanoparticles   | Prof.                  |
| Engineering           |   |                        |
| Thermal-fluid         | Radiative heat transfer control technology that contributes to heat utilization       | Hiroki Gonome,         |
| engineering and       | technology such as solar heat recovery, disaster prevention technology, spacecraft    | Prof.                  |
| radiative heat        | thermal design and photothermal cancer treatment.                                     |                        |
| transfer Robotics and | Tolombotics and vietual mality  | Vijahi Tauraalii Deaf  |
| mechanical motion     | Telerobotics and virtual reality  | Yuichi Tsumaki, Prof   |
| control engineering   | Mechanism and control of mobile robots, and applications thereof                      | Kazuhisa Mitobe, Prof. |
|                       | The education and research on the creation of new functions of robots by              | Riichiro Tadakuma,     |
|                       | applying ingenious mechanisms   | Prof.                  |
| Biorobotics           | Robots having flexible mechanisms and adaptive behavioral abilities similar to        | Kenji Inoue,Prof.      |
|                       | those of living creatures; and robotic microhands that enable micro manipulation of   |                        |
|                       | cells   |                        |

| Tissue engineering                  | Stem cells, tissue construction, and culture bioreactors for regenerative medicine and myocardial regeneration   | Feng Zhonggang Prof.              |
|-------------------------------------|--|-----------------------------------|
| Biomolecular functional engineering | Analysis of the functions of motility protein, which plays the central role in the motility systems of living creatures, and application thereof to nanotechnology | Kuniyuki Hatori,<br>Assoc. Prof.  |
| Systems and control engineering     | Analysis and control of dynamical systems that include adaptive, nonlinear, and reaction-diffusion systems   | Eiichi Muramatsu,<br>Assoc. Prof. |

### [Architecture and Building Science, Design, and Management]

| Field             | Contents of Education and Research  | Instructors           |
|-------------------|---|-----------------------|
| Advanced          | Research and education on the principle and method of the traditional wooden        | Sadashi Hama,         |
| Architectural     | construction in private houses, shrines and temples.                                | Assoc Prof.           |
| Planning          |   |                       |
| Advanced          | Research and education on cutting-edge building structure design methods and        | Kazuya Mitsuji, Prof. |
| Structural        | analysis of time history data such as seismic response and dynamic soil-structure   |                       |
| Engineering in    | interaction on building.  |                       |
| Building          |   |                       |
| Advanced          | Research and education on understanding and verifying the actual conditions of the  | Yumi Takasawa,        |
| Innovation Policy | region, identifying issues, and developing methods to solve problems                | Assoc. Prof.          |
| Advanced          | Research and education on the construction of design theory in architectural design | Yuki Munemasa,        |
| Architectural     | and mathematical analysis of the elements of architectural and urban space.         | Assoc. Prof.          |
| Designing         |   |                       |
