

# Towards further Sustainable Social System

Associate Professor Keigo MATSUDA

## Content :

Energy savings of industrial processes are inevitable demands for the sustainable world since the processes are the biggest energy consumers in the industries. To improve energy efficiency is important.

Therefore, We are conducting research and development in order to build a sustainable social system that leads to the next generation.

The overview of our project is shown.

1. Saving and Creating Energy of the industrial process
2. Optimization of Renewable Energy Network
3. Materials development support above

We hope that its will contribute to our sustainable world.
